LIBRARY AND TECHNOLOGY INTEGRATION
MONTHLY REPORT

MA was a hive of activity in February. Winter Carnival and Winter Break created an atmosphere full of positive energy and enthusiasm. A great feeling of community was fostered through many activities, and the excitement was palpable in the library as well.

Ms. Bouchard’s 7th grade science classes used the computer lab in the library to research selected topics dealing with the brain. Each student created a specific question on an aspect of the brain they were interested in learning more about. They looked for information by consulting the library databases and the Internet. Research questions included how the brain reacts to sleep, why REM sleep is important for brain development, and how memory works. Students then created presentations that answered their research question.

Dr. Bruneau’s Film & Literature students visited the library and used the computer lab to research North Korea’s economy. They created a website on Weebly which explained how North Korea’s economy operates as well as outlining the key economic differences between the United States and North Korea.

Finally, in collaboration with Mr. Vallée, two middle school students had their book review published in Voice of Youth Advocates, a national magazine for librarians serving teens and young adults.
